SUMMARY

Informatics graduate (GPA 3.68/4.00, Outstanding Graduate Award) with a strong foundation in data science, predictive modeling, and business analytics. Experienced in querying and structuring complex databases, interpreting market trends, and delivering data-driven solutions—including an IEEE-published machine learning paper and a 1st-place data clash victory. Competent in translating complex datasets into actionable business strategies and interactive reports. Seeking a Data Analyst role to drive growth through rigorous data analytics.

EDUCATION

Hacktiv8 Bootcamp

Comprehensive Data Analyst Bootcamp (Remote)

Jakarta, Indonesia

May 2026 - Present

- Intensive program focusing on advanced data analytics, business intelligence, and data storytelling.

Telkom University

Bachelor Degree, Informatics (GPA 3.68/4.00)

Bandung, Indonesia

Sept 2021 – Aug 2025

- Honors : Outstanding Graduate Award at the Faculty Level Third Period, 2024/2025 Academic Year
- Relevant Coursework : Data Visualization, Introduction to AI, Statistics, Database Modeling, Database Systems, Data Structures, Recommender Systems, Social Network Analysis, Machine Learning, ICT Project Management, Software Analysis and Design.

English Domestic

General English Program (1 Month, Offline) - Predicate: Excellent

Kediri, Indonesia

Sept 2025 - Oct 2025

- Scores : Speaking Foundation: 89; Pronunciation: 90; Speak Smart: 87.

WORK EXPERIENCE

GoAR Global

Fullstack Web Developer

Yogyakarta, Indonesia

Dec 2025 – Mar 2026

- Architected and delivered a vaccination clinic management system from scratch (PHP, MySQL, HTML, CSS), covering booking workflows, participant tracking, and vaccination status modules used in live clinic operations.
- Designed normalised database schemas and validation logic, improving data consistency and reducing input errors during operational rollout.
- Handled end-to-end development covering requirements analysis, database design, backend logic, and frontend build.

GoAR Global

Web Developer Intern

Yogyakarta, Indonesia

Apr 2025 – Jun 2025

- Contributed to Neovox, a web-based English learning platform — implemented interactive frontend interfaces and backend logic using PHP and MySQL.
- Designed and optimised database schemas supporting user progress tracking and multi-module content management.
- Translated functional requirements into tested, sprint-ready features under senior developer supervision.

GoAR Global

Database Architect Intern

Yogyakarta, Indonesia

Jul 2024 – Aug 2024

- Designed and optimized database schemas to support scalable data management for the Funplay application project.
- Created comprehensive ERD documentation for data modeling and system design.
- Collaborated with developers to align database structures with functional and technical requirements.

SKILLS

General Skills: Exploratory Data Analysis (EDA), Time Series Analysis, Machine Learning, Statistical Data Modeling, Data Cleaning & Transformation.

Programming Language: Python, SQL, JavaScript, PHP, HTML, CSS.

Visualization Tools: Looker Studio, Tableau / Power BI, Spreadsheets (Microsoft Excel, Google Sheets).

Libraries / Framework: Scikit-Learn, Pandas, NumPy, Matplotlib, Seaborn.

Tools & Databases : PostgreSQL, MySQL, Git / GitHub.

Techniques: Database Design (ERD Modeling), Predictive Modeling, Feature Engineering.

Modeling Algorithms: Regression, Decision Trees, Random Forest, Naïve Bayes, Support Vector Machine (SVM), Clustering.

Others: Technical Writing & Presentation, Cross-Functional Team Collaboration.

PROJECTS

Portugal Property Market Trend Analysis

June 2026

Project Description: Cleaned and processed raw real estate datasets using Python, then executed comprehensive trend and market analysis via Spreadsheets to evaluate structural housing metrics and 10-year construction variables, successfully converting the insights into actionable pricing strategies to target a 10% sales increase.

Technology / Tools: Python (Pandas), Google Sheets, Data Cleaning, Trend Analysis, Market Evaluation.

Foot Locker Sneaker ETL Pipeline

June 2026

Built an end-to-end ETL pipeline to extract sneaker product data from Foot Locker Indonesia using Selenium and BeautifulSoup, perform data cleaning and transformation with Pandas, and store the processed dataset into PostgreSQL for structured data management..

Technology / Tools: Python (Pandas), Selenium, BeautifulSoup, PostgreSQL, SQL, pgAdmin, Jupyter Notebook, Web Scraping, ETL Pipeline, Data Cleaning.

Nutritional Status Classification in Kalijambe (IEEE Published Paper)

May 2025

Preprocessed public healthcare datasets and built a machine learning framework comparing Naïve Bayes and SVM algorithms, optimizing classification precision for toddler malnutrition diagnoses to achieve a peer-reviewed IEEE publication.

Technology / Tools: Python, Pandas, NumPy, Scikit-Learn, Imbalanced-Learn (RandomOverSampler), Matplotlib, Seaborn, Machine Learning Pipelines.
